Frontend developer React (NextJs)

+998 (95) 010-33-00 | ishamsiddinov.97@gmail.com

ABOUT ME: Frontend Software Engineer (2 years) specializing in React and Next.js, with a growing expertise in NestJS and Node.js for back-end development. Passionate about building user-friendly, full-stack web applications with clean, maintainable code. Focused on delivering reliable and effective digital experiences through a well-rounded understanding of both client and server-side technologies.

EXPERIENCE

Dynamic Soft 2024 Feb – present as **frontend developer**

E-commerce Development:

- Enhanced SEO by 15% by implementing lazy loading with Next.js Images, utilizing native Next.js data fetching methods, and adhering to semantic HTML best practices
- Implemented complex cart logic using proven techniques, including syncing basket data with the backend database, handling promo codes, and boosting performance through memoization. This resulted in the most precise and effective cart functionality across multiple e-commerce projects.
- Introduced technologies like next-auth, next-intl, and rtk-query to enrich the frontend stack, improving security by implementing refresh tokens. These enhancements increased the company's flexibility in selecting the right stack for specific projects, improved code quality, and reduced development time.
- Mitigated form-based Denial of Service (DoS) attacks by implementing a HoneyPot schema in free-form contact submissions, preventing bots from sending endless data and potentially crashing the server. This was the first such schema used across several projects, improving system security

EPoS Systems:

- Developed complex UI/UX and logic using the latest stable technologies, including Ant Design (Antd) UI, enhancing user clarity and enabling faster comprehension and interaction

Hoca Inc. 2023 Aug – 2023 November as **frontend developer intern**

During my internship program, I contributed as a Frontend Software Engineer to two projects. The first was a platform for job seekers. The second was a map application aimed at optimizing route finding, where I worked on developing user-friendly interfaces and enhancing the frontend experience.

EDUCATION

- Higher. MDIST, Bachelor's degree Business and Management Sep 2020 - Jul 2023

COURSES

- NAJOT TA'LIM OQUV MARKAZI, Full stack web programming, May 2022 – Jun 2023
